

TECHNICAL SPECIFICATIONS

IntelliTRIAL™ Software Technical Description

Network Specifications

IntelliTRIAL™ is an all-inclusive, network-based solution that runs on a WINDOWS XP or WINDOWS 2000 PROFESSIONAL environment. This means that it can be accessed by many users across multiple sites and geographic locations. It also means that the software needs to be installed on each desktop that will be using the system. It does not require a separate server – it can be installed on any properly configured existing server with at least 100 MG of disk space. It can be accessed outside the office via a CITRIX or VPN connection.

Database Requirements

The database can be installed on an existing instance of Microsoft's SQL Server (accessible to desktops via TCP/IP). If a site does not have SQL Server, we can provide a copy of SQL EXPRESS as part of the initial installation. The database is fully encrypted and therefore HIPAA-compliant, and a complete audit trail of every transaction is logged in the database's internal system.

Desktop Requirements

PC with 128 MB or more of RAM
300 MHz or higher processor clock recommended – Intel compatible
Super VGA (800 X 600) or higher-resolution video adapter and monitor

Security

IntelliTRIAL™ provides complete user and data security features. Users' logons are managed through your local area network, meaning that users must be properly authorized to access the system, but no additional logon steps will be required. Security features within the system limit each user's access to information depending upon his/her role in the organization. All user level security is easily changed and updated at the site by the site administrator. Only the administrator has the authority to add/change users, or change data in the underlying edit tables.

Technical Support

IntelliTRIAL™ operates a help desk in Minneapolis, Minnesota that provides support as needed during normal business hours. This support is provided at no charge for the first year after purchase of the system, and all upgrades/enhancements are also provided at no additional charge during the first year.

After the first year, technical support and upgrades are provided for 18% of the initial purchase price.

Licensing

IntelliTRIAL™'s base price includes licenses for up to ten users. Additional volume licensing is available at a small additional charge per user. There is no limit to the number of licensed users that can be added to the system.
